Anti-Human DGAT2L3 Polyclonal Antibody

多克隆抗体

产品货号: PA03519

第三版

描述:The protein encoded by this gene belongs to the diacylglycerol acyltransferase family. It esterifies long chain (wax) alcohols with acyl-CoA-derived fatty acids to produce wax esters. Wax esters are enriched in sebum, suggesting that this enzyme plays a central role in lipid metabolism in skin. Consistent with this observation, this protein is predominantly expressed in the sebaceous gland of the skin. AWAT1 (Acyl-CoA Wax Alcohol Acyltransferase 1) is a Protein Coding gene. Among its related pathways are Arachidonic acid metabolism and Wax biosynthesis. GO annotations related to this gene include transferase activity, transferring acyl groups other than amino-acyl groups and long-chain-alcohol O-fatty-acyltransferase activity. An important paralog of this gene is DGAT2L6.

抗原:Synthesized peptide derived from the C-terminal region of human DGAT2L3

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:Predominantly expressed in skin, where it is limited to the sebaceous gland. Expressed in more mature, centrally located cells just before their rupture and sebum release. Also expressed in all tissues except spleen. Expressed at higher level in thymus, prostate and testis.
